Scrum Meeting Notes 12-4-2021

Agenda:
- ❖ Frontend mobile optimization (bonus points)
- ❖ General feedback on the frontend
- ❖ Heroku usage

Comments:
- Raj says that mobile optimization for the front end is possible, should not be too bad since majority of the code is completed
- The frontend already has the grayscale, high contrast, and dark mode. Included the dark mode in order to make sure we hit all the accessibility features
- Martin thinks that the website is very cool, he tried out all the buttons and it works perfectly in heroku
- Mark thinks the mobile optimization is clean and is viewable on all devices. He said that it's great we will get bonus points for it
- Jakob and Aayush said the frontend is awesome and they all stated that they did some changes to the backend to make sure it does not crash in production
- This has been proven and tested
- Heroku works perfectly but it only works on Raj's laptop. CSCE315-P3-Frontend and CSCE315-P3-Backend are the target folders in Raj's personal Github.
- Updating will be done later and the heroku is configured for automatic updates to the personal github.
