<u>Scrum Meeting Notes 11-5-2021</u>

- Agenda
  - Product/sprint backlog
  - Deliverables
  - Recommendations
  - Future Sprint discussion

- Raj says the issue with Twitter, returning final data with aayush. Hitting endpoint and giving data but when you look for next data, sends bad info, needed if-else statement to fix the problem.
- Twitter search returns good data to interpret and better than what is expected.
- Needs someone to look at martin's code and change his code to use controllers, there are a few overlapping genre names. Needs Martin's code to send as an API, works, but needs to return the same thing Twitter returns
- Mark needs to build igdb code as a controller and make sure it works.
- Raj changed variable names in Mark's code, and extended a few things properly.
- Discussing Heroku deployment, need to get necessary things for Heroku
- Product backlog, each individual needs to add their specific tasks into the full product backlog
- On Sunday, we need to get the sprint stuff in, product backlog update, and working product
- The recommendation needs to be thought about
- Right now, only genre works, the next sprint needs to pull from all other APIs, pull from the platform. Overlaps such as multiple platforms should work with filtering recommendations.
- Find other categories that we can recommend from besides what we have, the rating is only recommending highest rated
- Need to discuss specific recommendations, such as recommendation per user ie user puts in favorite category and developer and spits it out.
- Recommendation limited to what we can pull from the APIs
- Needs to do product backlog properly
- Sprint 2 includes recommendations
- Since we have progressed forward with the project, everybody knows what direction the product is going so we know where to go
- Sprint 3 may include adding twitch
- Before Sunday, we should discuss recommendations based on endpoints, aim for 2ish recommendations
- Talk about accessibility features
- Make sure to focus on product backlog!!!
